

# Steel Armoured Cat.6A Patch Cable

very thin cable

flexible and space saving

robust and durable

rodent protection

Ø 3.8 mm  
● dark grey

The steel armoured Cat.6A patch cable is 45% smaller in diameter compared to standard Cat.6A patch cords and takes up to 50% less space in the server rack.

The small cable diameter and the construction of the steel jacket make the cable very flexible and allow a much smaller bending radius than a standard patch cable. The smooth surface reduces cable clutters and ensures improved air circulation and cooling in the server cabinet.

The stainless steel sheathing also makes the cable very resistant and ideal for frequent use.

## Features

- Cable sheathing made of stainless steel SUS304  
Outer Diameter: 3.8 mm / Colour: dark grey
- Cable: Copper / Cat.6A STP 4x2x AWG32/7  
PVC Insulation
- 2x RJ45 Plugs: 8P8C  
50µ gold plated / shielded
- Grommet with latch protection / black
- 10 GBit / 500 MHz
- Cat.6A Channel tested  
(test protocol is included with each cable)

## Advantages

- High density
- Clear cable management
- Short lengths from 15 cm
- Rodent protection

## Applications

- Home Office
- Test rooms
- Events
- Industrial environments
- Storage rooms
